Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A system for data transmission without loss of data integrity comprising:

a transmitting system comprising a first lexicon including a plurality of digital sequences with unique corresponding identifiers, wherein each of the digital sequences is greater in size than the corresponding unique identifiers;

a receiving system;

a transmission medium coupling said transmitting and receiving systems, said transmitting system capable of transmitting at least one of said plurality of unique corresponding identifiers to said receiving system in lieu of said at least one corresponding digital sequence.

2. (Previously Presented) The system of claim 1 comprising:

another system capable of receiving at least one of said plurality of unique corresponding identifiers from one of said transmitting or receiving systems.

3. (Previously Presented) The system of claim 1 wherein said receiving system comprises a second lexicon including a plurality of digital sequences with unique corresponding identifiers.

4. (Previously Presented) The system of claim 2 wherein said another system comprises another lexicon including a plurality of digital sequences with unique corresponding identifiers.

5. (Previously Presented) The system of claim 1 wherein said unique corresponding identifiers are based upon hashes of said corresponding digital sequences.

Appl. No: 09/781,920
Amdt. Dated March 23, 2006
Reply to Office action of January 31, 2006

6. (Previously Presented) The system of claim 1 wherein said unique corresponding identifiers are based upon sequential identifiers for said corresponding digital sequences.

7. (Previously Presented) The system of claim 1 wherein said unique corresponding identifiers are based upon a hash based file system.

8. (Original) The system of claim 1 wherein a digital sequence to be transmitted from said transmitting system to said receiving system is factored into a number of digital sequence chunks for which corresponding unique identifiers are ascribed.

9. (Original) The system of claim 8 wherein said digital sequence to be transmitted is factored by means of sticky byte factoring.

10. (Previously Presented) The system of claim 1 wherein said first lexicon further comprises information regarding contents of other lexicons in said system.

11. (Previously Presented) The system of claim 3 wherein said first and second lexicons comprise information regarding content of other lexicons in said system.

12. (Original) The system of claim 1 wherein data transmissions within said system are effectuated on a point-to-point basis.

13. (Original) The system of claim 1 wherein data transmissions within said system are effectuated on a point-to-multipoint basis.

14. (Original) The system of claim 1 wherein data transmissions are routed in said system based on metrics derived from said first lexicon.

15. (Previously Presented) A method for data transmission without loss of data integrity comprising:

providing a transmitting system comprising a first lexicon including a plurality of digital sequences with unique corresponding identifiers;

Appl. No: 09/781,920
Amdt. Dated March 23, 2006
Reply to Office action of January 31, 2006

providing a receiving system;

coupling said transmitting and receiving systems through a transmission medium, said transmitting system capable of transmitting at least one of said plurality of unique identifiers to said receiving system in lieu of said at least one corresponding digital sequence.

16. (Original) The method of claim 15 comprising:

providing another system capable of receiving at least one of said plurality of unique identifiers from one of said transmitting or receiving systems.

17. (Previously Presented) The method of claim 15 wherein said receiving system comprises a second lexicon including a plurality of digital sequences with unique corresponding identifiers.

18. (Previously Presented) The method of claim 16 wherein said another system comprises another lexicon including a plurality of digital sequences with unique corresponding identifiers.

19. (Original) The method of claim 15 wherein said unique identifiers are based upon hashes of said corresponding digital sequences.

20. (Original) The method of claim 15 wherein said unique identifiers are based upon sequential identifiers for said corresponding digital sequences.

21. (Original) The method of claim 15 wherein said unique identifiers are based upon a hash based file system.

22. (Original) The method of claim 15 further comprising:

factoring a digital sequence to be transmitted from said transmitting system to said receiving system into a number of digital sequence chunks; and ascribing corresponding unique identifiers therefor.

23. (Original) The method of claim 22 wherein said step of factoring is carried out by means of sticky byte factoring.

Appl. No: 09/781,920
Amdt. Dated March 23, 2006
Reply to Office action of January 31, 2006

24. (Previously Presented) The method of claim 15 wherein said first lexicon further comprises information regarding contents of other lexicons in said system.

25. (Previously Presented) The method of claim 17 wherein said first and second lexicons comprise information regarding content of other lexicons in said system.

26. (Original) The method of claim 15 wherein data transmissions within said system are effectuated on a point-to-point basis.

27. (Original) The method of claim 15 wherein data transmissions within said system are effectuated on a point-to-multipoint basis.

28. (Original) The system of claim 15 further comprising:
routing data transmissions in said system based on metrics derived from said first lexicon.

29. (Currently Amended) A system for symbolic exchange of digital sequences without loss of data integrity comprising:

first and second computer systems comprising respective first and second local lexicons including a plurality of digital sequences with unique corresponding identifiers; and

a transmission medium coupling said first and second computer systems;
said first computer system operative to transmit a first unique identifier to said second computer system in lieu of said corresponding digital sequence[.];

wherein said second computer system is operative to compare said first unique identifier to [[a]] contents of said second local lexicon and request said first computer system to transmit said corresponding digital sequence to said first unique identifier if said first unique identifier is not present in said second lexicon.

30. (Cancelled)

31. (Original) The system of claim 29 wherein said first computer system is operative to transmit said corresponding digital sequence to said first

Appl. No: 09/781,920
Amdt. Dated March 23, 2006
Reply to Office action of January 31, 2006

unique identifier if said first computer system is aware that said second lexicon does not contain said unique identifier.

32. (Original) The computer system of claim 31 wherein said second computer system is operative to add said corresponding digital sequence to said first unique identifier to said second local lexicon if not previously contained therein.

33. (Previously Presented) The computer system of claim 31 further comprising:

a third computer system comprising a third local lexicon including a plurality of digital sequences with unique corresponding identifiers, said third computer system coupled to one of said first or second computer systems and operative to receive a first unique identifier therefrom in lieu of said corresponding digital sequence.

34. (Original) The computer system of claim 29 wherein said transmission medium comprises a network.

35. (Original) The computer system of claim 34 wherein said network comprises the Internet.

36. (Original) The computer system of claim 29 wherein said unique identifiers are based upon a hash of said corresponding digital sequence.

37. (Original) The computer system of claim 29 wherein said digital sequence comprises a file.

38. (Original) The computer system of claim 29 wherein said digital sequence comprises a video stream.

39. (Currently Amended) A method for symbolic exchange of digital sequences without loss of data integrity between first and second computer systems including respective first and second local lexicons tables in memory

Appl. No: 09/781,920
Amdt. Dated March 23, 2006
Reply to Office action of January 31, 2006

containing a plurality of digital sequences with unique corresponding identifiers,
said method comprising:

transmitting a first unique identifier from said first computer system to said
second computer system in lieu of said corresponding digital sequence[.];

comparing said first unique identifier to said contents of said second local
table; and

requesting said first computer system to transmit said corresponding
digital sequence to said first unique identifier if said first unique identifier is not
present in said second local table.

40. (Cancelled)

41. (Currently Amended) The method of claim 39 further comprising:
transmitting said corresponding digital sequence to said first unique
identifier if said first computer system is aware that said second ~~lexicon~~ local
table does not contain said unique identifier.

42. (Currently Amended) The method of claim [[40]] 39 further
comprising the step of:

adding said corresponding digital sequence to said first unique identifier to
said second local ~~lexicon~~ table in not previously present therein.

43. (Currently Amended) The method of claim 39 further comprising
the step of:

providing a third computer system comprising a third local ~~lexicon~~ table
including a plurality of digital sequences with unique corresponding identifiers;

coupling said third computer system to one of said first or second
computer systems; and

receiving a first unique identifier from said one of said first or second
computer systems in lieu of said corresponding digital sequence.

44. (Original) The method of claim 39 wherein said unique identifiers
are based upon a hash of said corresponding digital sequence.

Appl. No: 09/781,920
Amdt. Dated March 23, 2006
Reply to Office action of January 31, 2006

45. (Original) The method of claim 39 wherein said digital sequence comprises a file.

46. (Original) The method of claim 39 wherein said digital sequence comprises a video stream.

47. (New) The method of claim 39 further comprising with said first unique identifier generating a new digital sequence at the second computer system that comprises said corresponding digital sequence retrieved from said second local table.

48. (New) The method of claim 47 wherein the generating of the new digital sequence comprises retrieving the corresponding digital sequence from the second local table by indexing with the first unique identifier and wherein the new digital sequence comprises additional ones of the plurality of digital sequences retrieved from second local table based on a set of the unique corresponding identifiers received from the first computer system.
